

Lecture 5

Lecture 5

- ▶ The discrete-time sinusoid $x[n] = \cos(\omega n + \phi)$

Lecture 5

- ▶ The discrete-time sinusoid $x[n] = \cos(\omega n + \phi)$
 - ▶ ω is an angle increment (rad/sample)

Lecture 5

- ▶ The discrete-time sinusoid $x[n] = \cos(\omega n + \phi)$
 - ▶ ω is an angle increment (rad/sample)
 - ▶ periodicity only when

Lecture 5

- ▶ The discrete-time sinusoid $x[n] = \cos(\omega n + \phi)$
 - ▶ ω is an angle increment (rad/sample)
 - ▶ periodicity only when $\omega =$ rational multiple of π

Lecture 5

- ▶ The discrete-time sinusoid $x[n] = \cos(\omega n + \phi)$
 - ▶ ω is an angle increment (rad/sample)
 - ▶ periodicity only when $\omega =$ rational multiple of π
 - ▶ effective range of ω : 0 (lowest) to π highest

Lecture 5

- ▶ The discrete-time sinusoid $x[n] = \cos(\omega n + \phi)$
 - ▶ ω is an angle increment (rad/sample)
 - ▶ periodicity only when $\omega =$ rational multiple of π
 - ▶ effective range of ω : 0 (lowest) to π highest
- ▶ Sampling $x(t) = \cos(\Omega t + \phi)$ every T_s sec

Lecture 5

- ▶ The discrete-time sinusoid $x[n] = \cos(\omega n + \phi)$
 - ▶ ω is an angle increment (rad/sample)
 - ▶ periodicity only when $\omega =$ rational multiple of π
 - ▶ effective range of ω : 0 (lowest) to π highest
- ▶ Sampling $x(t) = \cos(\Omega t + \phi)$ every T_s sec
 - ▶ produces $x[n] = \cos(\omega n + \phi)$

Lecture 5

- ▶ The discrete-time sinusoid $x[n] = \cos(\omega n + \phi)$
 - ▶ ω is an angle increment (rad/sample)
 - ▶ periodicity only when $\omega =$ rational multiple of π
 - ▶ effective range of ω : 0 (lowest) to π highest
- ▶ Sampling $x(t) = \cos(\Omega t + \phi)$ every T_s sec
 - ▶ produces $x[n] = \cos(\omega n + \phi)$
 - ▶ by varying T_s , any ω can be obtained from Ω
