ENEE 434 Information for Second Presentation

1.   The presentation should consist of a discussion of the main results obtained from the base paper, including the neural networks simulated, describing equations, motivation and results obtained/anticipated, and any difficulties encountered.
        Computer power point presentations are most desired since they are becoming standard for professional society presentations. These should be on a CD, USB memory stick, or similar memory medium for use in a standard PC (one of the ECE Helpdesk computers to be brought to class by the instructor).

2.   If there is an update to the one page handouts of the first presentation this should be brought for the whole class. Otherwise the audience should use the previous handout for reference of the key ideas.

3.   At the end of the presentation the Commentator should hand in two pre-class prepared copies of three written questions that are to be orally raised by the Commentator at the end of the Presenter's presentation. These too will be graded primarily as to depth of concept. The Commentator should also comment on any concepts that are key to the presenter's network which the audience should be further informed about, such as other alternatives and other results.
