

## ENEE 417 Information for Presentations

### Base Paper Presentation

1. This is an up to 17 minute power point presentation plus 5 minutes for the commentator which should consist of a discussion of the main results obtained from the base paper, including the main circuits simulated, describing equations, motivation and experimental results obtained, and any difficulties encountered.

Computer power point presentations are most desired since they are becoming standard for professional society presentations. These should be on a USB memory stick (for use in the lab PC) or via access of the web.

2. [Commentator Duties] At the end of the presentation the Commentator will have 5 minutes in which to ask three questions. Also a written copy of the questions should be turned in. These too will be graded primarily as to depth of concept.
